

ASTERIA

Workforce retention

Results and evidence

31 December 2025 snapshot | Synthetic workforce data

HEADLINE

Senior retention is 11.43 points below target

78.57%

Senior 12-month retention
target 90.00%

87.15%

Six-month retention
target 86.00%

5.10%

Regretted turnover
ceiling 7.50%

Senior 12-month retention: 78.57%

Company-wide retention and turnover are healthy. The gap is concentrated in senior staff.

Cleaning preserves uncertainty

2,407

rows supplied

2,400

unique records after
7 exact duplicates

8

country aliases
standardized

9

missing countries
kept as unknown

10

invalid-date records
quarantined

Raw data stays unchanged. Every exclusion is auditable.

METHOD

Metrics count only eligible cohorts

1,580 / 1,813

Six-month: 87.15% retained

209 / 266

Senior 12-month: 78.57% retained

82 exits

divided by 1,607.52 average daily headcount = 5.10%

- Hires 2021 to 2025. Only hires who reach the milestone by the snapshot enter the denominator.
- Termination on the anniversary counts as retained.
- Senior 2025 hires: unavailable (0 mature hires), so pending hires stay out.
- Turnover including unknowns: 5.23%, still under the 7.50% ceiling. This is a scenario, not a confidence interval.

Coverage varies and associations are weak

60.2%

Unemployment coverage
 $r = -0.123$

99.7%

Annual CPI coverage
 $r = 0.162$

77.7%

Vacancies (industry and construction)
coverage
 $r = -0.009$

Only sources published before the cutoff are used, so no future data leaks into a hire or window. Small cohorts, reused vintages and selection prevent causal conclusions.

SOLUTION

Working today, designed to scale

Python

Cleaning, metrics, temporal joins

SQLite

Reconciled reporting views

HTML

Interactive dashboard and audit context

One entry point: `scripts/run_pipeline.py`. Saved evidence supports offline replay.

Production path: Azure Data Factory schedules, ADLS and Databricks build validated Delta tables, and only approved runs reach SQL and Power BI.

Future design only. No cloud deployment.

RECOMMENDATIONS

Close the senior retention gap first

1. Diagnose

Investigate internal drivers of the senior shortfall: tenure band, role, department and exit timing.

2. Fix the data

Resolve the 9 missing countries and unknown classifications so segments are reliable.

3. Extend evidence

Add more historical vintages before making stronger economic claims.

Ask of the business

Agree an owner for the senior retention review and re-measure once 2025 senior hires mature.

Human direction set scope and approved every change; Codex built code, tests and slides, with source evidence and repeat runs checking outputs. A hidden-generator recovery approach was rejected. Limits: no causal claims, no deployed cloud system.
